SHAHZAIB WAHEED

Frontend Developer (Full-Stack Experience)

Sialkot, Pakistan | Email: shahzaibux.ui@gmail.com | Phone: +92 316 7194681
GitHub | LinkedIn

CAREER SUMMARY

Junior full-stack developer with a frontend focus — independently built and deployed 4 full-stack/frontend projects using React frontends, Flask backends, and AI-integrated features (Google Gemini API). Security-conscious: identified and patched a prompt-injection vulnerability in a live AI pipeline. Comfortable owning a product end-to-end, from UI to database to deployment, with a strong eye for interface design and usability from a parallel UI/UX design practice in Figma.

PROJECTS

ZaibHunt — AI Job-Hunting Agent — *2026*

React · Flask · SQLAlchemy · JWT · Gemini API · Adzuna API

- **Secured the AI cover-letter pipeline by diagnosing and patching a prompt-injection vulnerability, validated through before/after regression testing against a poisoned job listing**
- Architected a full-stack application across four core modules — JWT-based authentication, resume parsing via pdfplumber, live job aggregation through the Adzuna API, and Gemini-driven fit-score matching with automated cover-letter generation
- Deployed a production-ready system end-to-end, provisioning Netlify for the frontend and PythonAnywhere for the Flask backend

Live Demo · GitHub

ZaibChat — AI Chatbot — *2026*

React · Flask · Google Gemini 2.5 Flash

- Engineered a real-time AI chat interface with theme toggling, persistent conversation history (rename/delete), voice input, and multi-modal file & image upload
- Integrated a Flask backend with the Gemini API and deployed the full stack via Netlify (frontend) and PythonAnywhere (backend)

Live Demo · GitHub

Weather App — *2026*

React JS · Vite · OpenWeatherMap API

- Implemented a custom useWeather React hook to power live weather data, 5-day forecasting, and GPS-based geolocation detection
- Optimized the user experience with °C/°F unit toggling, persistent search history via localStorage, and dynamic backgrounds driven by real-time weather conditions

Live Demo · GitHub

StrikeGear — Sports E-Commerce — *2026*

HTML5 · CSS3 · JavaScript

- Developed a 6-page e-commerce storefront with client-side state management via localStorage for cart persistence, dynamic product filtering/search, and a fully responsive, animated UI

Live Demo · GitHub

SKILLS

- **Frontend:** HTML5, CSS3, JavaScript (ES6+), React JS, Bootstrap, jQuery, Responsive Design
- **Backend:** Python, Flask, SQLAlchemy, JWT Authentication, REST APIs, Gemini API / AI Integration
- **UI/UX:** Figma
- **CS Fundamentals:** Object-Oriented Programming, Data Structures & Algorithms, Git & GitHub
- **Other:** localStorage, Prompt Engineering

EDUCATION

Bachelor of Information Technology
University of the Punjab, Lahore — Graduated 2025
